 **OUTDOOR  
MEMBRANE**

Membrane PVC polyester textile : work +50°C to -50°C

Membranes used to cover GEODOMAS EVENTS DOMES structures are manufactured from highest quality materials from renowned European producers. All membranes are certified and their quality and performance are in line with European standards. All fabrics have certifications to fire-retardancy (such as M2 and B2).

The membranes are highly durable, made of polyester fabric, which are easy to keep clean and resistant to scratches. Membranes can be all white or in any desired RAL color.

Cover with transparent fronts: A cover with transparent front section, which creates a preview of domes interior and a perspective for those who are inside the dome. It is visually attractive solution encouraging to enter the spherical area. In addition the transparent front provides the natural sunlight inside the dome.

With the application of nontransparent front material it allows to create a complete darkness inside the dome, even during the day. Additionally due to 3-layered membrane structure, the opaque cover has higher thermal insulation properties and prevents the structure from overheating during sunny days.
